

Introducing PBA Barrier Free Systems from HDI

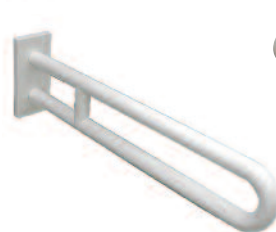

HDI Barrier Free Systems

Nylon Barrier Free Systems

Featuring a sophisticated Italian design, the 400NY Barrier Free product line is engineered to meet all of your project support needs. It is ideal for application in private and public buildings, encouraging independent barrier-free living.

Nylon (Polyamide 6) construction produces a smooth, hygienic surface and, as a poor conductor of heat, maintains a comfortable surface temperature in any environment. Nylon is available in ten colors to complement interior finishes. Clean, simple lines allow easy maintenance and cleaning. All products feature structural reinforcing and are tested to the highest international standards to ensure code compliance.

Program 400NY

Italian designs for barrier free living

The 400 line of products provides a variety of sophisticated, yet simple designs constructed from nylon over a structural frame, stainless steel grade AISI 316L or a blend of both materials. Select items are available in custom sizes – contact a customer service representative for more information.

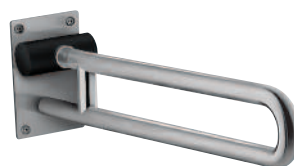

Stainless Steel Barrier Free Systems

By integrating AISI 316L stainless steel elements, the 400SS Barrier Free product line offers additional design options to the 400NY range. Both nylon and stainless steel series offer many types of grab bars, fold-up and stationary supports, seats, shower curtains and rods, and bath and washroom accessories. Available finishes for stainless steel are brushed (standard) or polished per request.
